Subject: Harbor Island Soil & Groundwater Operable Unit 2018 Annual Groundwater Monitoring Report

Dear Mr. Sanga,

On behalf of the Harbor Island Soil and Groundwater Operable Unit potentially responsible parties (the Steering Committee), attached is the 2018 Annual Groundwater Monitoring Report prepared by AECOM. The report summarizes the results of the thirteenth year of groundwater monitoring consisting of one May event in accordance with the Groundwater Monitoring Plan – Revision 3 Plan and Addendum 1 of the Revision 3 Plan.

Additionally, The Harbor Island 5-yr review Report is due to be completed in 2020. Since we are currently completing annual sampling during the May/June timeframe, AECOM recommends that the 5-yr review groundwater sampling event be completed during the annual 2019 sampling event to ensure data and statistical analyses are delivered to you prior to the start of the fifth 5-yr review Report to be completed by EPA for this Site. As per the requirements the 5-yr Review sampling will include the ROD chemicals of concern at the 26 monitoring wells currently in the monitoring network.

If you have any questions, please contact Warren Hansen at 206 812-5434 or me at the contact information below.

Yours sincerely,

Renee Knecht, L.G.
